

Henrik Oscarsson

CTO · Engineering leadership & AI-driven development

henrik@capsor.se · +46 (0)705 – 77 08 79 · capsor.se · Stockholm

PROFILE

CTO who makes engineering teams faster by changing how they work, not by adding process. At CIKO, I merged three teams (15 engineers) into one and introduced agentic development; together, those changes cut feature delivery from weeks to days. Behind it are 25 years of hands-on engineering in trading (AMEX, Credit Suisse, NASDAQ OMX, SIX Telekurs), payments and high-performance systems, so the advice holds up technically. Comfortable in C-suite steering groups, anchoring technology decisions in the business and the other way round.

EXPERIENCE

CTO — CIKO (Trygga)

Apr 2026 – present · Stockholm

CIKO is a Swedish job security council. It builds its own platform, Trygga, and also licenses it to other transition organisations in Sweden.

- Turned three teams into one 15-person engineering team with tight, everyday communication, in under six months.
- Replaced ticket-by-ticket status meetings with one daily standup on the single most important topic.
- Removed tickets, refinement and approvals for anything under half a day, creating flow and ownership and a platform that keeps improving.
- Introduced working in pairs and threes to spread knowledge and a shared engineering approach.
- Rolled out agentic, AI-driven development (Claude, Superpowers). Features now ship in 1–2 days instead of 1–2 weeks.

CTO — Valuno Group (formerly Quickbit)

Jan 2025 – Mar 2026 · Engineering Manager & Solution Architect, then CTO from May 2025

Crypto payment solutions in a high-transaction environment with built-in monitoring and surveillance.

- Set the technical standard and direction for the payment platform (AWS, GCP, blockchain).
- Hired and built the engineering team; mentored and coached engineers.
- Simplified the platform to fewer moving parts, frameworks and languages.
- Introduced an AI-first approach to increase productivity and speed of delivery.

Fullstack Developer — FRISQ

Oct 2023 – Dec 2024

Hands-on role building a community service for managing and sharing digital care plans: Angular and React frontends, Spring Boot microservices, FHIR integrations, Google Cloud. Also improved architecture and performance.

Solution Architect & Tech Lead — Barnebys Group

May 2022 – Oct 2023

White-label auction platform that gives Nordic auction houses an online presence.

- Improved the overall architecture, project structure and information flow, with significant performance gains.
- Helped establish continuous deployment, with the team deploying at least once a day (Azure, Docker, Microsoft Orleans).
- Mentored developers.

EARLIER CAREER

2020 – 21	**Trust Anchor Group** — Architect and developer of a Xamarin/.NET app for managing digital IDs and contracts.
2020	**AMEX** — Architect and developer of an API (MongoDB, Express, React, Node.js) for an HR skills-management framework.
2019 – 20	**iFACTS** — Senior developer focused on performance in a large insurance and claims platform (.NET Core, SQL Server).
2017 – 18	**TFF** — Tech lead and architect: performance review and improvements of a WPF/.NET client, middleware and backend.
2015	**ustwo / POWA Technologies, London** — Tech lead for 16 developers in a 40-person, £1M e-commerce programme. Reviewed the backend and API libraries, and supervised mobile app development.
2012	**NASDAQ OMX** — Greatly improved the performance of an electricity-certificate trading client by reworking its threading model and model/view design (C++, MFC).
2010 – 11	**Credit Suisse, London** — Software architect on a new FX and options trading system, from pre-study to delivery (with HiQ and ustwo).
2009 – 10	**Atlantic Airways** — Built an RFID tool-tracking system end to end, hardware and software.
2006 – 07	**SFE, Australia** — UI architect and front-end lead on a clearing and settlement system.
2006	**Collectum** — Designed a security and access-control model for a multi-tier .NET platform (PKI).
2004 – 12	**SIX Telekurs** — Architect and senior developer on the SIX Edge real-time trading terminal across several assignments: a DirectX real-time grid, MiFID support, order management and .NET migrations.
2003 – 04	**Tattersalls, Australia** — Applications for an online gaming platform (Java, encrypted XML data).
2000 – 03	**AMEX, New York** — Front-end developer on a new equity trading system, then designer and lead developer of its migration from OpenVMS to .NET, including teaching the team C#.

EMPLOYMENT

2026 –	**CTO, CIKO**
2025 – 26	**CTO, Valuno Group AB**
2008 –	**Founder, Capsor AB** — consultancy for assignments since 2008.
2007 – 08	**Founder, dipod**
2004 – 07	**Software Architect, Canvisa Consulting AB**
2000 – 04	**Software Developer, CATS AB**

SKILLS

Leadership: ways of working, team design and turnarounds, hiring, mentoring and coaching, C-suite steering groups, agentic and AI-driven development.

Technical: architecture and performance, AWS, GCP, Azure, .NET / C#, Java, React, Node.js, blockchain.

EDUCATION & TRAINING

2026	Organisation, Team, Ledarskap, Handelshögskolan
2024	Designing and Building AI Products and Services, MIT xPro
2012	Graphic Design & Communication, Berghs School of Communication
2009	Certified Scrum Master, London
2006	Project Manager, Learning Tree
2000	M.Sc. Computer Engineering, Uppsala University
